Summary

I'm a third-year Computer Software Engineering student with a strong focus on AI and software development. During my internships, I've contributed to projects like a match simulator for a football admin dashboard and an optical network management system. I enjoy collaborating in teams, tackling complex problems, and continuously expanding my skill set.

Currently, I'm working on my capstone project in AI, exploring Large Language Models and RAG, and I plan to pursue a master's in AI and Data Science at York University in Thessaloniki. I'm excited to apply my knowledge to innovative projects that drive real-world change in AI.

Work Experience

Software Engineer, Aztech (Internship)
June 2024 - September 2024

- Worked on an optical network management system built with Laravel, managing routers, users, OLTs, and network configurations.
- Developed and optimized backend functionalities for provisioning, monitoring, and troubleshooting network devices.
- Assisted in documenting system architecture, workflows, and APIs to improve maintainability and onboarding.

Software Engineer, Digimak (Internship)
June 2023 - September 2023

- Enhanced a football admin dashboard built with Laravel and Vue.js by developing a match simulator.
- Created logic to generate match data for games not covered by the sports data providers.
- Implemented real-time event tracking and match period management for accurate simulations.
- Introduced AI for the first time in development, creating AI-generated match previews for enhanced user experience.

Education

Bachelor Degree - Computer Software Engineering and Information Systems, University American College Skopje
2022 - Present

Science And Mathematics Program, High School - "Jane Sandanski"
2018 - 2022
